ACM Transactions on Algorithms (TALG) (ISSN: 1549-6325) is published four times a year in January, April, July, October by the ACM, the Association for Computing Machinery, is an international scientific and educational organization dedicated to advancing the art, science, engineering, and application of information technology, serving both the professional and public interests by fostering the open interchange of information and by pro-

The ACM Transactions on Algorithms (TALG) is an international, refereed journal that publishes high-quality papers that significantly advance the field of algorithms, with an emphasis on the analysis of algorithms, both in the classical sense and in the sense of the design and implementation of algorithms. The journal welcomes papers that contribute to the understanding of the mathematics of computing, to the development of novel algorithms, and to the improvement of the analysis of algorithms.

To submit a paper to the ACM Transactions on Algorithms, visit the ACM Manuscript Central website at http://www.manuscriptcentral.com/talg. Follow the instructions to create an account and submit your paper. The submission process is entirely online, and authors can track the status of their manuscripts through the system.

The ACM Transactions on Algorithms encourages authors to submit papers that address novel algorithmic developments, theoretical analysis of algorithms, and practical applications of algorithms. The journal publishes papers that are of broad interest to the algorithms community and has a strong emphasis on the quality of the research and the clarity of the presentation.

For more information, visit the ACM Transactions on Algorithms website at http://www.acm.org/talg. Contact the Editor-in-Chief for questions or to submit a paper.
